Dowsing control of the « Plocher E-Smog protection Angle »

Dear Mister Uilderks,

During the « Plocher E-Smog protection Angle » dowsing control, we determined the following effects.

Action zone :

- If the Plocher E-Smog Angle is attached directly to the wiring entering or exiting the fuse box of the property, it is effective throughout the whole building. It positively polarises the measured energy level of 8,000 Bovis units exhibited in individual areas of the three storey house being examined. The effect began immediately after the attaching.

Action on the radiation polarisation :

- Polarisation of radiation emitted is changed by the Plocher E-Smog Angle. The anti-clockwise rotating, negative radiation in the electrical field is converted into a clockwise rotating, positive radiation. Therefore, the effect of the radiation changes in humans. The diminishing, weakening effect of the anti-clockwise rotating radiation becomes a developing, strengthening effect in the clockwise rotating radiation field.

Action on the energy level of the magnetic field :

- The energy level of electrical fields is raised by the Plocher E-Smog Angle up to a favourable level of 8,000 Bovis units. This energy level is suitable for humans in the long term and creates a developing, vitalising effect on humans.

Effect on the body's own energetic field :

- As a result of our investigations we can state that the energy field of a human being, the aura, stays stable in size, form and energy level when this person comes in contact with an electro-smog treated with the Plocher E-smog Angle. In a comparable field, which was not treated by the Plocher E-Smog Angle, the aura of the tested person became smaller and its energy level dropped to close to 2,000 Bovis units. Human energy levels stabilise in the Plocher- treated field at around 8,000 Bovis units.

Result :

- We determined that the Plocher E-Smog Angle changes the harmful influences of electricity so that the negative effects on living organisms are switched off, and positive effects can be recognised. We would particularly recommend application of the Plocher E-Smog Angle for infants and children, who are usually particularly sensitive to electro-smog.

Please accept my sincere salutations

Markus Bauer, Dipl.-Ing.
